

**WEICON GmbH & Co. KG**

## **Protective spray for welding processes**

### **Ceramic Anti-Spatter Spray**

Muenster, January 2022 – For protection during welding processes, Weicon has developed a special separating agent and dry lubricant – the Ceramic Anti-Spatter Spray.

### **Protective coating for MIG/MAG welding processes**

Weicon Ceramic Anti-Spatter Spray is a high-grade separating and lubricating agent and is suitable for highest pressures and temperatures of over +1,000 °C. The spray is a ceramic protective coating for MIG/MAG welding processes. It forms a spatter-resistant dry film, which prevents the adhesion of welding spatters. That way, welding tips and gas nozzles are protected.

Thanks to the use of the spray, downtimes and interruptions in the production process are minimised. Ceramic Anti-Spatter Spray is silicone-free.

### **Protection of weld heads and co.**

The spray protects weld heads on welding robots, welding tips and gas nozzles as well as sensitive equipment, cables, sensors etc. from the adhesion of welding spatters.

Thanks to its high temperature resistance, it is also suitable for applications in plasma and laser cutting, in brazing technology, aluminium extrusion, the foundry industry, sinter metallurgy, the glass industry and high-temperature furnace construction.
